

## The project 'LIVESTOCK'

The environmentally sound areas, where is already being applied technology блокчейн, for a healthy life of the use of cows, horses, deer, which allows with a record trading has to see effective use of real capital.

This project will also apply in daily life, The CARAT in everyday life. The reserchers believe our findings can be useful for people in everyday life.

Food and мясоперерабатывающая industry, which is produced by the press that, as well as the supply of Korean traditional medicines to strengthen public health.

The technology " carat " for breeding livestock will be possible thanks to systems tracking .

Until now, " carat " successfully applied technology блокчейн, but now for the implementation of the food products has been possible to use still more tracking system. If you enable sensors (sensors) the things the whole process of trade, from breeding livestock and nurturing с.х. crops in the Territory on. you can capture, as well as in real time to constantly updated information.

The whole process : выкармливание, breeding, processing, packaging, the spread of livestock, didn't go there much the deer, КРС - all the information will be stored in the access technology and блокчейн.

Thanks to increased development information media, the use of large numbers, there is transparency, which minimizes the all the shortcomings

The мясопереработанной of (beef, конина, venison) directly depends on the following factors. Cultivated to eat food that does not contain GMO. Hot water,

storage, transportation, processing, dissemination and sale of фабрикатов, moisture levels on the basis of critical benchmarks must be in accordance with all norms and be carried out on tape, which should have access. In that case the possibility of falsification comes to.

Such a transparent system tracking products be a solution for all problems, providing a guarantee for the quality of meat products and пантов a deer, which is highly regarded in Korean traditional medicine. Thus, one can discern the successful implementation of the блокчейн technology.

The list of goods on the production of :

- Rosa, agricultural culture, mushrooms, fruit, tea from дикорастущих the grass
- Vodka, sauce, cheese, yogurt and so on.
- cows (breeding cows, meat of the bull by халяльной products will be exported)
- horse (breeding horses for equestrian sports, as well as for their meat / export to Japan)
- deers (didn't go there much)
